Use Bootstrap v5 to implement all of the requirements below.

Create/Use the labs/BOOTSTRAP_LAB directory in your local repository.

Create a 1-page landing page for a local (non-chain) restaurant.

Header

- Use the Bootstrap's **responsive** navbar component, to implement a navbar that is expanded on **medium** or larger devices, and collapsed on smaller devices.
    - Include name of the restaurant in a div tag (remember to apply the **navbar-brand** class)
    - Include a link to their full menu (target="_blank" to open the menu in a new tab)
    - Include a link to them on google maps (target="_blank" to open the map in a new tab)
- Give the header a **light colored background** using Bootstrap's color utilities.
- Apply the **navbar-light** class to make the text in the header black.

Main

- Jumbotron
    - Include a jumbotron at top of the main area.
    - Include the name of the restaurant in an **h1** tag.
    - Include the restaurant's **logo.**
    - Include the restaurant's **phone number.**
        - Add a **tel:** link so that users can directly call this number on mobile devices.
    - Include the restaurant's **full address.**
        - Add a **geo:** link so that users can directly open the address in their navigation app on mobile devices.

    - Apply a background image to this section.
    - Set the text color to a contrasting color, so that the text is easily readable.
    - Apply text-shadow to make the text more readable against the background.

- Menu
    - Include a short menu of 5 entrees.
        - Each entree must include the name
        - Each entree must include a short description
        - Each entree must include the price
        - Each entree must include an image
        - Apply a different background color to each entry
    - Include a link to their full menu (target="_blank" to open the menu in a new tab)

    - Layout the menu responsively using a **Bootstrap Grid.** This layout must show 4 items per row at the largest screen size, 2 items per row on a smaller screen size, and 1 item per row at the smallest screen size. (You can pick the actual breakpoints to fit your content, but use Bootstrap's column classes to implement this.)
    - Implement each menu item as a **Bootstrap Card.** This card must include the following classes: **card, card-img-top, card-body, card-title, card-text**

- Map
  - Include an embedded map for the restaurant
  - You can get the necessary code for the required <iframe> directly from Google Maps https://support.google.com/maps/answer/144361?co=GENIE.Platform%3DDesktop&hl=en#:~:text=embed%20a%20map%20or%20directions
  - Give this section a solid background color (other than white) and a contrasting text color using Bootstrap's color utilities.

Footer

- Include a copyright line for the restaurant, which reads: "© 2021 Restaurant Name"
  - Use © to insert the copyright symbol.
  - Replace "2021" with the current year.
  - Replace "Restaurant Name" with the restaurant's name.
- Center the text using Bootstrap's text utilities.
- Give the footer a dark background color using Bootstrap's color utilities.
- Make all the text in the footer white using Bootstrap's color utilities.
